

The EMX-3 can sew absolutely flat as well as gathered

The EMX-3 with spot gathering capabilities provides the accuracy needed to sew intimate apparel and swimwear

- Can store up to 3 "set-ups", each with up to 5 tension steps
- Program can advance from one tension step to the next automatically by stitch counting or with a knee switch
- "Advance/pullback" feature ensures garment symmetry and repeatability. To transfer rate changes quickly to the needle, the metering mechanism 'pulls back' on the elastic for gathering, then 'advances' the elastic quickly for flat sewing

Note: On all orders, please specify the make and class number of the sewing machine with which the unit will be used. Also indicate your voltage requirement and whether the metering mechanism will be top-mounted or bottom-mounted

The low-profile metering mechanism (right) mounts closely to the machine, giving the operator a clear view of the needle
