

HAND-HELD | INDUSTRIAL HAND-HELD BUTT SEAMING MACHINE

Ships With:

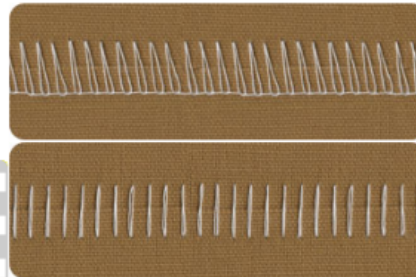

OPERATING SPEED	20 ft/min RPM
STITCH WIDTH	5/8"
STITCH RANGE	1/8"
STANDARD NEEDLE	10 S
MERROW NEEDLE RANGE	10 S
FEDERAL STITCH TYPE	501
MOTOR REQUIRED*	None
NUMBER OF THREADS	Single Thread

Description

The Merrow Hand-Held Butt Seaming Machine allows the operator to sew a traditional butted seam from multiple locations and positions. It is the lightest and fastest hand-held serger available and will sew a variety of wovens, non-wovens, and even knits.

Stitch Samples

The Advantage of the HAND-HELD

The Merrow Hand-Held Butt-Seamer is an industrial piece of equipment that allows the operator to sew at multiple angles and positions and from multiple locations. It offers true portability and unmatched maneuverability, filling the gaps left by stationary butt-seamers.

WHY it's better

The Hand-Held sews a wide 5/8" butted seam on wovens, knits, and lightweight non-woven material. Like all Merrow butt-seamers, it sews a uniform and flat stitch and won't lap or bunch material within the seam.

HOW it's better

The Merrow Hand-Held sews at a brisk 20 ft./min (6m/min) and is a single thread machine with cutters. Like all Merrow Butt-Seamers, it is a true serger and is affixed with fabric cutters to ensure that material is seamed smoothly and in a straight line. It weighs a paltry 8.75 lbs (~4kg) and if necessary can be suspended from a weight absorber.

WHERE it's used

The Merrow Hand-Held is used for any application requiring a butted-seam; it is frequently used at the end of a continuous process to repair damaged or skipped seams. Although it is broadly used throughout the textile industry, its appeal extends to any industry where material is seamed as part of a continuous process.

The HAND-HELD is one of more than 350 variations of the Merrow 70-D3B-2
