

MG-3DW-7 | INDUSTRIAL SEWING MACHINE FOR SEAMING HEAVY FABRICS

Description

The Merrow MG-3DW-7 is Merrow's general overseaming machine for bulky, heavy fabrics. Known for its versatility, the MG-3DW-7 has been in daily operation throughout the textile and knitting industries for decades.

Stitch Samples

OPERATING SPEED	5500 RPM
STITCH WIDTH	1-4" Standard
STITCH RANGE	20 - 40 SPI
STANDARD NEEDLE	MERROW 5SDT
MERROW NEEDLE RANGE	MERROW 1SDT-8SDT
FEDERAL STITCH TYPE	504
MOTOR REQUIRED*	Merrow M12, 1/2HP, 3450 RPM
NUMBER OF THREADS	3-6

MG-3DW-7 Applications

STRUCTURAL SEAM FOR MICROFIBER SLIP COVERS

FLAME RESISTANT SEAM FOR NOMEX FLIGHT SUITS

HEM CLOSURE FOR KEVLAR GLOVE CUFFS

The Advantage of the MG-3DW-7

The Merrow MG-3DW-7 is the best performing industrial overlock sewing machine for sweaters, fleece, and heavyweight wools. It sews a 1/4" stitch at high speed (5500 RPM) that won't pucker, curl, or pull back thread. It is a single needle, three-thread machine built on Merrow's proprietary cam driven architecture, which makes the machine as durable as the stitch is resilient.

WHY it's better

When it comes to tight, strong, uniform, and resilient seams, the MG-3DW-7 is unequalled. It is designed with simplicity in mind - simple to thread, simple to sew, and simple to service - taking the burden off the operator and placing it directly on the machine. And because it is a Merrow, you know that it will last a lifetime. This combination of seam quality and machine durability has made the MG-3DW-7 the sewing machine of choice for overseaming heavy materials for decades.

HOW it's better

The MG-3DW-7 sews a tight needle stitch using three threads, and its wide opening cutters accommodate thick seams, multiple layer inserts - even crossing elastic sections. It provides extra loop and needle throw which is a must when sewing heavier knits and wovens.

WHERE it's used

The MG-3DW-7 should be used anywhere that quality seaming is required - sweaters, blankets, sportswear, or outerwear are common applications.
